

Introduction

Purpose

This manual provides network-specific information for Passport™ V22 systems at stores running Fiserv® network, also known as Concord and previously known as First Data™ Corporation (FDC).

IMPORTANT INFORMATION

Ingenico® PIN Pad End of Support

Due to end of life of the Ingenico iSC250 and iPP320 PIN Pads, these devices were not certified with the Fiserv network for Passport V22. When upgrading to V22, Passport will check to see if an Ingenico PIN Pad is connected. If one is detected, the following error message will be displayed. **“The system has detected an Ingenico PIN Pad which is no longer approved by the credit network. Please replace with VeriFone® (MX915, M400, and P400) or contact Technical Support at 1-800-743-7501”**, and the upgrade will be aborted. For a clean installation of V22, Ingenico will not be an option on the Register Set Up screen.

IMPORTANT INFORMATION

When upgrading a site to accept EMV®, advance notice to the Fiserv network is required. EMV functionality affects inside and outside transactions. At least two full days before the scheduled upgrade, advise the merchant to contact the Fiserv network and explain that the site is implementing an upgrade to Passport to enable EMV. The merchant should advise the network representative of the date the upgrade is to take place, and request that the network prepare to enable EMV with appropriate Parameter Downloads (PDL) on that date. Ask the merchant to let you know if the network is unable or unwilling to make the necessary preparations for enabling EMV for the store.

On the day of the scheduled upgrade, ask the merchant or store manager if he notified the Fiserv network of the need to prepare to enable EMV network communication. If the merchant or store manager has not notified the Fiserv network of the need to enable EMV network communication, call the network on behalf of the merchant or store manager. Ask the network representative if he can expedite enabling EMV functionality for the store within four hours. If the network representative indicates he can prepare for enabling EMV on the network within the next four hours, continue with the upgrade. Otherwise, consult the merchant or store manager regarding your options, which are:

- Upgrade without enabling EMV and return later for the PDL Download to enable EMV.
- Arrange a later date for the upgrade, after the network has sufficient time to enable EMV.

Intended Audience

This manual is intended for merchants, cashiers, store managers, and Passport-certified, Gilbarco® Authorized Service Contractors (ASC).

Note: Leave this manual at the site for the manager's reference excluding "Appendix C: Upgrading to Passport V22" on page 55. This manual is available for download by Passport certified ASCs on Gilbarco's Extranet Document Library (GOLDSM).

REVIEW AND FULLY UNDERSTAND "Appendix C: Upgrading to Passport V22" on page 55 BEFORE BEGINNING THE UPGRADE OR INSTALLATION OF PASSPORT V22 FOR FISERV GENERIC.

Technical Support

If you are a store manager or merchant and you need assistance with your Passport system, contact Gilbarco at 1-800-800-7498.

If you are an ASC and need to verify RAS connection or activate a Passport feature, contact Gilbarco at 1-800-800-7498. If you need assistance with an upgrade or installation issue, contact Gilbarco at 1-800-743-7501. Be prepared to provide your ASC ID.

To contact the Fiserv Help Desk, call 1-800-726-2629.

Network Data Retention

By default, the Passport system's network database saves all transaction details for 30 days, which means Passport purges network transaction details older than 30 days. However, this network setting can be changed by updating the **Days to Keep Network Data** field value, as described in the **Global Information - Page 2** tab (see [Figure 13](#) on [page 18](#)). The **Days to Keep Network Data** field can accept values between 30 and 120 days, inclusive.

What's New in Passport V22 at Fiserv Stores

First Data Premium Gift Card Support

Beginning with Passport Version 22.01 support for "First Data Premium Gift Card", BIN: 601056 for Valero and Generic brands was added. This card will be hydrated by default once Passport is fresh installed or upgraded to Passport version 22.01.

Fresh Install

Card will be added automatically to Card configuration and will be identified as "Premium Gift Card".

Upgrade

If card was previously configured under "Store Value Card", card will be clean from the configuration and will only display the new "Premium Gift Card".

Card Acceptance Information

New card is listed in Card Configuration and enabled by default.

Figure 1: Premium Gift Card Acceptance

The screenshot displays the 'Card Acceptance Information' configuration window. On the left is a scrollable list of card types, including American Express, Buypass Fleet, Concord Legacy Gift, Debit, Disc-Diners-Legacy, Discover, Discover-Diners, EBT Cash, EBT Food, FF PLCC Commercial, FF PLCC Consumer, FF Visa, Fleet 1, Fleetwide, Fuelman, Generic Proprietary, Gulf, Gulf Visa, Hess Visa, JCB, Mastercard, Mastercard Fleet, **Premium Gift Card**, Proprietary, Proprietary Fleet, Proprietary/IRV, Sinclair, Sinclair Advantage, Sinclair Driver, Sinclair Fleet, Stored Value Card 1, Stored Value Card 2, Stored Value Card 3, Valero Honor All, and Valero WEX. The 'Premium Gift Card' is highlighted. The main configuration area on the right contains the following fields: 'Accept Card' (dropdown set to 'Yes'), 'Inside Floor Limit' (text box with '0'), 'CRIND Floor Limit' (text box with '0'), 'CRIND Authorization Amount' (text box with '50'), 'CRIND Auth Control' (dropdown set to 'On Host Response'), 'AVS Zip Code Prompt' (dropdown set to 'None'), 'Can Use As Debit' (dropdown set to 'No'), 'Manual Entry Allowed' (dropdown set to 'Yes'), 'Track Configuration' (dropdown set to 'Preferred Track 2'), and 'Signature Required Limit' (text box with '0.00'). On the far right, there are 'Save' and 'Cancel' buttons. A Windows watermark is visible in the bottom right corner.

The transaction will be reported in the “Account Transaction By Day”.

Figure 4: Account Transaction By Day

Time	Account #	Card Type	Transaction Type	Terminal #	Approval #	Invoice #	Settlement Indicator
11:08:21	*XXXXXXXXXXXX4103	Premium Gift Card	POS	561225			
2021-12-20	XX/XX	\$ 0.00	Balance Inquiry	1	000027		
11:09:01	*XXXXXXXXXXXX4103	Premium Gift Card - SV2	POS	597537			
2021-12-20	XX/XX	\$ 6.00	Completion	1	000028		

A * sign beside the account number indicates repeated card use

Card Type	Local Count	Local Dollar
SVC Purchase/Completions (SV2)	1	\$ 6.00
Card Totals	1	\$ 6.00

*These categories are excluded from the grand totals (Card Totals)

FISERV/CONCORD Native Datawire

Beginning with Passport V22.01, support has been added to communicate to the Fiserv host using an MNSP router. This change eliminates the need for the Datawire MICRONODE hardware (and other Dial Emulation like devices).

To configure Passport to use native Datawire using an MNSP router, proceed as follows:

- 1 The site should contact their MNSP Provider to update the MNSP Firewall Access Rules to support the FISERV destination location “Gilbarco Native Datawire”, a special type of primary host connection to the FISERV/CONCORD Payment Host.
- 2 Perform a Store Close and ensure that all current open sales/batches have been sent to the host. Ensure that there is no data in Store and Forward.
- 3 Contact the FISERV Datawire Helpdesk at 800-704-4202.
Inform the Help Desk that you want to provision the site for Gilbarco Datawire and make the request for “APPLICATION ID: GLBRCPASSPRTXML”. You may also have an agent look in the Merchant Application Provisioning database for Atlanta and provision for the GILBARCO VEEDER-ROOT/PASSPORT. Provisioning could possibly take up to 10 minutes.
- 4 Configure Passport in MWS for DATAWIRE (See [Figure 5](#) on [page 7](#)).
 - a Go to **Setup > Network > Concord > Network Site Configuration**.
 - b Select the **Global Information** tab **Page 1**.
 - c Select the **DATAWIRE** option for the **Host Connection Type** drop-down list.
 - d Click **Save** to save the changes.

Figure 5: Global Network Parameters - Page 1

SVC Activation Recharge Maximum: 0.00

Debit Cash Back Fee: 30

Debit Sale Fee: Yes

Days To Keep Network Data: 30

AVS Enabled By Host: Yes

Buttons: Save, Cancel, ? HELP

- 5 After saving the changes, perform a Communication Test. This Host Function is available under Network menu at the POS. Refer to [“CWS Network Functions”](#) on [page 50](#) for more information.
- 6 Run a test credit transaction inside and outside at the CRIND. If everything is successful, remove the older Dial Emulation hardware (Datawire Micronode).

Passport V22 Core Feature Enhancements

For information on any of the new core features, refer to *MDE-5646 What's New in Passport Version 22*.

What's New in Passport V21 at Fiserv Stores

What's New in Passport V21 at Fiserv Generic Stores

The following changes apply to all stores running on the Fiserv generic network:

New PIN Bypass Functionality

Beginning with Passport Version 21.03 and up the “credit or debit” prompt inside at the POS and outside at the Outdoor Payment Terminal (OPT) has been replaced by a new PIN bypass flow. When a customer presents their Debit/ATM card for payment, they will be presented with a PIN prompt, the customer is able to press ENTER, ***without*** entering a PIN and process the transaction as credit. If a PIN is entered, the transaction will be processed as a normal debit transaction. This change will provide the merchant with further liability protection against lost and stolen cards. The new prompt flow for PIN entry is not configurable.

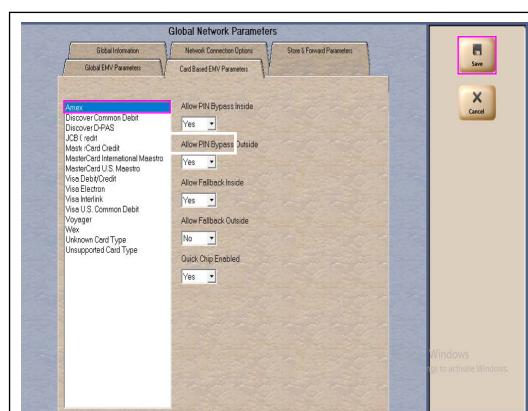

Allow PIN Bypass for American Express Cards

Beginning with Passport V21.03, support for PIN bypass has been added at Automated Fuel Dispensers (AFD) for American Express®. The “Allow PIN Bypass Inside” and “Allow PIN Bypass Outside” options have been defaulted to “Yes” for American Express cards on the **Card Based EMV Parameters** tab in Global Network Parameters. When the value of the option is set to “Yes”, the customer is allowed to bypass PIN entry inside at the PIN Pad and outside at the CRIND.

To view or edit the configuration for PIN Bypass for American Express cards, proceed as follows:

- 1 Go to **MWS > Set Up > Network Menu > Concord > Network Site Configuration**.
- 2 On the Card Based EMV Parameters tab, select **Amex** card, select the **Allow PIN Bypass Inside** drop-down option or the **Allow PIN Bypass Outside** drop-down option, and select **Yes** or **No** to enable or disable PIN Bypass for American Express Cards.
- 3 Click **Save** to save changes.

Figure 6: Global Network Parameters - AMEX

EMV Contactless Outside for Wayne iX Pay

Beginning with Passport V21.03, support of EMV Outdoor Contactless for Wayne iX Pay Dispensers has been added. Customers may use EMV Contactless enabled credit or debit cards to pay for transactions. The customer may tap the card or position the card within proximity of the EMV-capable reader.

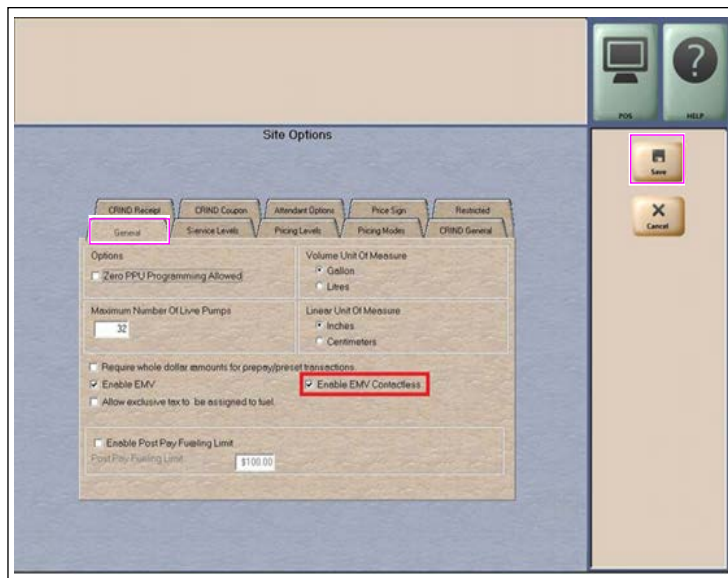

Dispensers need to be updated with the Wayne iX Pay 6.8.2.XX firmware.

To configure Passport for EMV Contactless for outdoor transactions, proceed as follows:

- 1 Go to **MWS > Fuel > Site Options**.
- 2 On the **General** tab, select the **Enable EMV Contactless** check box to enable EMV Contactless outside.

- 3 Click **Save** to save the changes.

Figure 7: Store Options - General Tab

Passport V21 Core Feature Enhancements

For information on any of the new core features, refer to *MDE-5574 What's New in Passport Version 21*.

What's New in Passport V20 at Fiserv Stores

What's New in Passport V20.04 at Fiserv Generic Stores

The following features have been updated or are new for Fiserv Generic stores.

EMV Contactless Outside

Beginning with Passport V20.04, EMV Contactless is available for outdoor transactions on FlexPay™ II (M5) or FlexPay IV (M7) dispensers equipped with EMV Contactless card readers. Customers may use their EMV Contactless enabled credit or debit card to pay for transactions. The customer may tap the card or must bring the card within proximity of the EMV capable reader.

- 1** To configure Passport for EMV Contactless for outdoor transactions, go to **MWS > Fuel > Site Options**.
- 2** On the **General** tab, select the **Enable EMV Contactless** check box to enable EMV Contactless outside.
- 3** Click **Save** to save the changes.

WEX and Voyager EMV

Beginning with Passport V20.04, WEX and Voyager EMV cards are accepted at Fiserv-Generic sites, both inside at registers (with one exception) and outside at dispensers equipped with EMV Contactless card readers. Voyager EMV cards are accepted inside only at registers equipped with a VeriFone MX915 PIN Pad. Voyager EMV cards presented at an Ingenico PIN Pad are treated as “unsupported”. To cause all unsupported EMV cards (including Voyager) to be processed as magstripe at inside registers equipped with an Ingenico PIN Pad, on the Manager Workstation (MWS) select **Set Up > Network Menu > Concord > Network Site Configuration**, on the Card Based EMV Parameters tab select **Unsupported Card Type** from the list in the left pane, configure “Allow Fallback Inside” to **Yes**, and select **Save**.

If EMV cards are already being accepted at the site, a new PDL is not required.

IMPORTANT INFORMATION
Configuring Passport to process unsupported cards as magstripe applies to any unsupported card that is presented. This configuration change should be made only after the merchant fully understands and approves the change.

Wayne iX Pay™ Terminal

Passport V20.02 is the first release to support Wayne iX Pay payment terminal for EMV with communication via IP.

To configure Passport to communicate with a Wayne iX Pay payment terminal, proceed as follows:

- 1** Go to **Set Up > Forecourt > Forecourt Installation**.
- 2** Click the **Payment Terminals** tab, select **Wayne CAT** for **Payment Terminal Type**.
- 3** Select the **Wayne CAT IP** check box, this enables the text box for the IP address.

- 4 Enter the IP address of the payment terminal. If Wayne CAT IP is not selected, the payment terminal can be configured via the serial protocol.
Note: If a single IXpay board controls both sides of the dispenser, enter the same IP address for both sides.

For information on any of the new core features, refer to *MDE-5519 What's New in Passport Version 20*.

What's New in Passport V12 at Fiserv Stores

Passport V12 Core Feature Enhancements

For information on any of the new core features, refer to *MDE-5470 What's New in Passport Version 12*.

WEX Merchant Bulletin No. 20171001-2

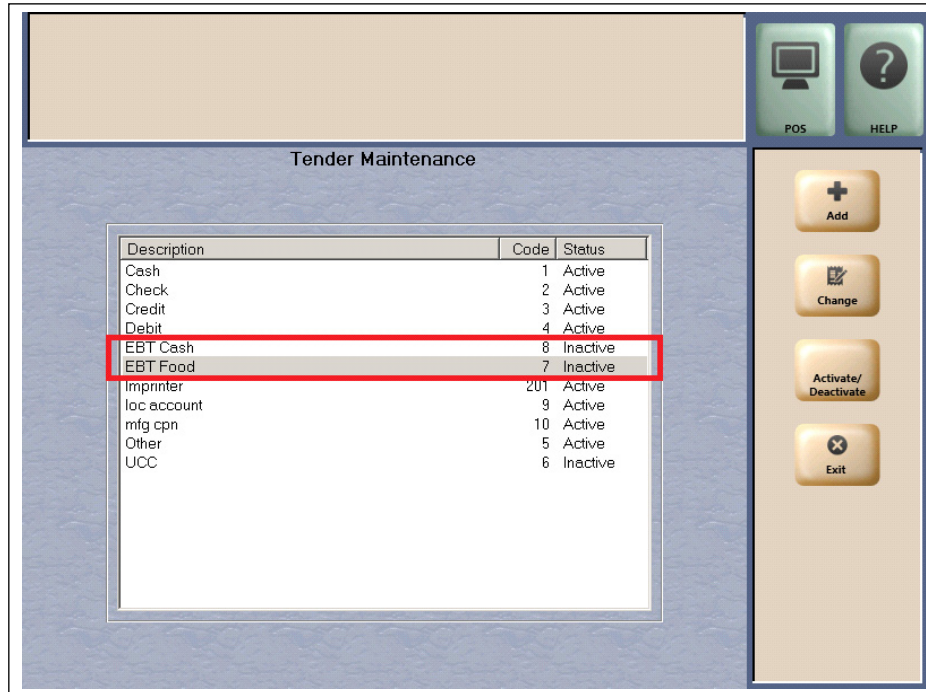

Starting with V12.02, Passport enables support of the Technical Specification Compliance Policy, effective January 1, 2019. The year 2020 compliance requirements of this notice will be part of a future release. Sites that are not compliant will face penalties via an increase in interchange rates. For more information on merchant requirements and penalties, contact WEX at MerchantInquiry@wexinc.com.

Network Integrated EBT Food and EBT Cash

Starting with V12.02, integrated processing of EBT Food and EBT Cash is now supported on the Fiserv network. Call your brand representative to engage Fiserv for integrated EBT activation. If you do not belong to a branded network, contact your merchant services account manager to update EBT in their system. If you currently do not have an account manager assigned, call the Toll-Free number on your merchant services statement for assistance and ensure to have your EBT/FNS number and merchant ID ready.

New EBT Food and EBT Cash tenders have been added to Tender Maintenance with the status of "Inactive". For stores that wish to process EBT tenders with Passport on the Fiserv network, a user should go to **MWS > Set Up > Store > Tender Maintenance** and highlight the EBT Cash tender and select **Activate**, and highlight the EBT Food tender and select **Activate** (see [Figure 9](#) on [page 14](#)). The tender options in Tender Maintenance for EBT Cash and EBT Food have been preconfigured, with the exception of the "NACS Tender code" and the "Allow safe drops" option. These may be configured using tender maintenance as needed by the site. The tender group assigned to EBT Cash and EBT Food should not be changed. Once the tender has a status of "Active", it is ready for use at the POS Cashier Workstation (CWS).

Figure 9: Tender Maintenance

If the site had previously defined EBT tenders using tender maintenance in an earlier version with the tender description “EBT Food” and “EBT Cash”, the upgrade will name the new EBT tenders “EBT Food*” and “EBT Cash*”. For sites that want to process EBT Food and EBT Cash with their primary network the site should deactivate the old tenders and use the new EBT Tenders.

Network Card Configuration

For the Fiserv network to process EBT Cash and EBT Food from the MWS main menu, proceed as follows:

- 1 Select **Set Up > Network Menu > Concord > Network Card Configuration**. The Card Acceptance Information screen opens.
- 2 Select **EBT Cash** and set the option “Accept Card” to **Yes**.

- 3 Select **EBT Food** and set the option “Accept Card” to **Yes**.

Figure 10: Network Card Configuration

The screenshot shows a software window titled "Card Acceptance Information". At the top, it asks "Is the card accepted?". Below this, there are two tabs: "Page 1" and "Page 2". On the left side, there is a list of card types. "EBT Food" is selected and highlighted with a red box. In the main area, the "Accept Card" dropdown menu is set to "Yes" and is also highlighted with a red box. Other fields include "Inside Floor Limit" (35), "CRIND Floor Limit" (0), "CRIND Authorization Amount" (50), "CRIND Auth Control" (On Host Response), and "AVS Zip Code Prompt" (None). On the right side, there are buttons for "POS", "HELP", "Save", and "Cancel".

Assigning Product Codes

Passport supports Payment System Product Codes for fuel and dry stock items. Passport transmits the product codes assigned to fuel and dry stock items when completing transactions with the network. It is important to assign the correct product code to fuel grades and dry stock items.

IMPORTANT INFORMATION

If fuel product codes are configured incorrectly, cards with grade restrictions will not be approved for fuel sales and host based discount transactions will not roll back the PPU discount properly. Use care in assigning fuel grades in **MWS > Set Up > Forecourt > Forecourt Installation** to ensure correct product code assignment.

Programming Network Site Configuration

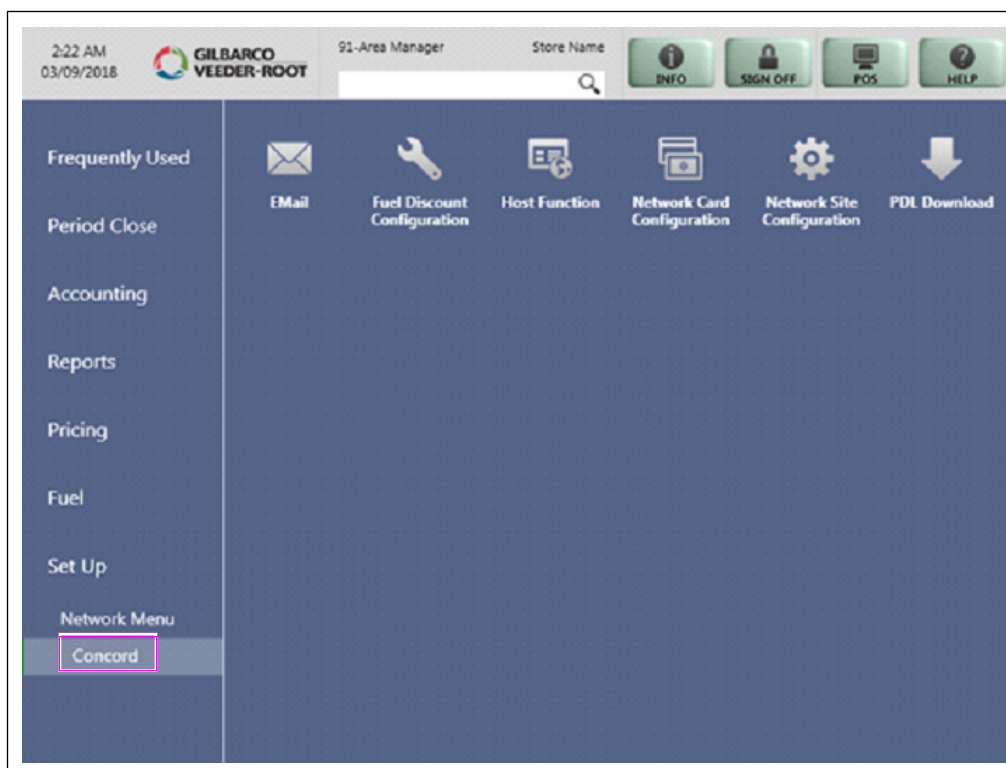

IMPORTANT INFORMATION

The Enhanced Dispenser Hub (EDH) must be installed and running before performing programming in **MWS > Set Up > Network**.

To establish communication with the Fiserv network, site configuration must be programmed correctly. To program network site configuration, proceed as follows:

- 1 From the MWS main menu, select **Set Up > Network Menu > Concord**.

Figure 11: Concord Network Configuration Menu

The Concord Network Configuration Menu screen opens. The following option buttons display on the Network Configuration menu screen:

- Email
- Fuel Discount Configuration
- Host Function
- Network Card Configuration
- Network Site Configuration
- PDL download

- 2 To program network configuration for the site, select **Network Site Configuration**. The **Global Network Parameters** screen opens.
- 3 Select the **Page 1** tab on the **Global Information** tab.

Figure 12: Global Information - Page 1 Tab

Fields on the Global Information - Page 1 Tab

Field	Description
Merchant Number	<p>This is a unique 13-character value provided by Fiserv to identify the site with the network. If the value that Fiserv provides is not 13 characters in length, the network does not have the site configured as a Passport system.</p> <p>Format for this field is AABBBBBCCCCDD, where:</p> <ul style="list-style-type: none"> AA is the terminal type; FG is a Passport BB is the two-digit state code (refer to "Appendix A: Valid State and Territory Codes" on page 53) CCCCC is the six-digit merchant identifier DD is the three-digit terminal identifier, usually 001
Station Name	The station name for the store that prints on receipts for network transactions.
Station Address	The address of the store that prints on receipts for network transactions.
Station City	The city in which the store is located that prints on receipts for network transactions.
Station State	The state in which the store is located that prints on receipts for network transactions.
Station ZIP Code	The ZIP code in which the store is located that prints on receipts for network transactions.
Host Connection Type	<p>The type of connection used by the site to connect to the network. Options are VSAT WITH DIAL BACKUP, VSAT, and DIAL.</p> <p>If the Host Connection Type field is changed, you must stop and restart the Passport system.</p> <p><i>Note: For the Datawire Micronode or EchosatSM (SmartLinkTM) Secure Payment Gateway (SPG), set this field to Dial.</i></p>

Field	Description
SVC Activation Recharge Granularity	The incremental amount allowed for activation or recharge of SVC cards. For example, if this field is set to \$1.00, SVC cards can be activated or recharged in single dollar amounts, such as \$1.00, \$2.00, \$3.00, and so on. If this field is set to \$2.00, SVC cards can be activated or recharged in even dollar amounts, such as \$2.00, \$4.00, \$6.00, and so on. This field cannot be set to greater than \$100.00.
SVC Activation Recharge Minimum	The minimum dollar amount required to activate or recharge SVC cards. This amount cannot be less than \$1.00 or greater than \$200.00.
SVC Activation Recharge Maximum	The maximum dollar amount required to activate or recharge SVC cards. This amount must be equal to or greater than the SVC Activation Recharge Minimum, but cannot be greater than \$999.00.
Debit Cash Back Granularity	The incremental amount allowed for cash back. For example, if this field is set to \$1.00, cash back can be given in single dollar amounts, such as \$1.00, \$2.00, \$3.00, and so on. If this field is set to \$2.00, cash back amounts can be given in even dollar amounts, such as \$2.00, \$4.00, \$6.00, and so on. This field cannot be set to greater than \$100.00.
Debit Cash Back Minimum	The minimum dollar amount of cash back that a customer may receive on a sale transaction. This amount cannot be greater than \$200.00.
Debit Cash Back Maximum	The maximum dollar amount of cash back that a customer may receive on a sale transaction. This amount must be greater than or equal to the Cash Back Minimum but cannot be greater than \$200.00.
EBT Cash Back Granularity	The incremental amount allowed for cash back. For example, if this field is set to \$1.00, cash back can be given in single dollar amounts, such as \$1.00, \$2.00, \$3.00, and so on. If this field is set to \$2.00, cash back amounts can be given in even dollar amounts, such as \$2.00, \$4.00, \$6.00, and so on. This field cannot be set to greater than \$100.00.

- 4 After completing all fields on the **Global Information - Page 1** tab, select the **Page 2** tab.

Figure 13: Global Information - Page 2 Tab

The screenshot shows the 'Global Network Parameters' window with the 'Global Information' tab selected. The 'Page 2' sub-tab is active, displaying a list of parameters for EBT Cash Back and Debit Cash Back. The parameters include EBT Cash Back Minimum, EBT Cash Back Maximum, Debit Cash Back Fee, Debit Sale Fee, Days To Keep Network Data, AVS Enabled By Host, Print store copy of the receipt inside, and Print customer copy of the receipt inside. The values for the first four parameters are 0.00, and Days To Keep Network Data is 30. The last three parameters are set to Yes. The window also features a 'Save' button and a 'Cancel' button on the right side.

Parameter	Value
EBT Cash Back Minimum	0.00
EBT Cash Back Maximum	0.00
Debit Cash Back Fee	0.00
Debit Sale Fee	0.00
Days To Keep Network Data	30
AVS Enabled By Host	No
Print store copy of the receipt inside	Yes
Print customer copy of the receipt inside	Yes

Fields on the Global Information - Page 2 Tab

Field	Description
EBT Cash Back Minimum	The minimum dollar amount of cash back that a customer may receive on a sale transaction. This amount cannot be greater than \$200.00.
EBT Cash Back Maximum	The maximum dollar amount of cash back that a customer may receive on a sale transaction. This amount must be greater than or equal to the Cash Back Minimum but cannot be greater than \$200.00.
Debit Cash Back Fee	The dollar amount the customer is charged as a fee for including cash back in a transaction. This amount cannot be greater than \$99.00. This field also applies to EBT cash back.
Debit Sale Fee	The dollar amount the customer is charged on all debit transactions. This amount cannot be greater than \$99.99.
Days to Keep Network Data	The number of days network data can be kept in the database until it is purged. This count cannot be less than 30 days or greater than 120 days. Default is 30 days.
AVS Enabled by Host	This is a Yes/No field. If set to Yes, AVS is enabled by the network. Passport receives this field from the network. The field is not editable.
Print store copy of the receipt inside	If set to Yes, the merchant copy of the receipt prints automatically for all inside Fiserv network transactions. This may be especially important for stores that enable electronic signature capture at the PIN Pad, as the customer signature prints as part of the receipt.
Print customer copy of the receipt inside	If set to Yes, the customer copy of the receipt prints automatically for all inside Fiserv network transactions. This may be especially important for stores that enable electronic signature capture at the PIN Pad, as the customer signature prints as part of the receipt.

After completing all fields on the **Global Information - Page 2** tab, select the **Network Connection Options** tab. If the site is to be configured for Dial or VSAT with Dial backup, then select the **Page 1** tab.

IMPORTANT INFORMATION

The DataWire, Micronode, and EchoSat (SmartLink) SPG devices must use 9600 baud rate. The ASC must call the network or device provider to request a change in the baud rate on their side as well as programming the Passport to use 9600 baud rate.

Note: Sites that are using Datawire, Echosat (SmartLink) SPG, or VSAT Indoor Unit (IDU), which are configured for Dial emulation, must obtain all relevant information for the Network Connection Options screens from the Credit Card host provider or the device provider. In addition, the Fiserv Help Desk may need to provide some information.

Fields on the Network Connection Options Tab

Field	Description
Com Port*	The COM Port number on the EDH to which the modem, Micronode, or Dial emulation device is connected.
Baud Rate*	The dial baud rate used by the modem. Options are 1200, 2400, 4800, 9600, 14400, and 28800. <i>Note: For Datawire, EchoSat (SmartLink) SPG, set to 9600. Call the Fiserv Help Desk, Datawire, or EchoSat (SmartLink) to request they set the baud rate to 9600 and download any firmware updates required. If this is not done successfully, network communications fail.</i>
Access Code*	Numbers that the modem must dial to reach an outside line. That is, if you dial "9" to reach an outside line. Leave this field blank for the Datawire Micronode device.

Field	Description
Download Phone Number*	The main phone number the modem uses to dial the network for initial PDL request and processing (maximum 18 digits). This field may be the same as the value in the Primary Phone Number field. Set this field to 77090001 for the Datawire Micronode device.
Primary Phone Number*	The main phone number the modem uses to dial the network for transaction processing (maximum 18 digits). Set this field to 77090001 for the Datawire Micronode device.
Secondary Phone Number*	The alternate phone number the modem uses to dial the network for transaction processing (maximum 18 digits). Set this field to 77090001 for the Datawire Micronode device.
Init String*	The 40-character modem initialization string that is sent to the modem each time a link is established with the modem. <ul style="list-style-type: none"> MultiTech® 009: AT&F0V0E0&K0&Q6%CX4S37=5&Z0 MultiTech 007: AT&F+A8E=,,,0VE&K&Q6%CX4+MS=1
Dial Header*	The dial command to the modem, including tone generation (default is ATDT). Leave this field blank for the Datawire Micronode device. <ul style="list-style-type: none"> MultiTech 009: ATS7=15S10=2S11=50S25=0&W0 MultiTech 007: not needed
Dial Trailer*	The five-characters added to the end of the dial string. Default is blank. Enter # if required by the site's modem. Leave this field blank for the Datawire Micronode device.
DTMF Speed*	The speed between each number sent to the modem. Options are: <ul style="list-style-type: none"> FAST MEDIUM SLOW Select MEDIUM for the Datawire Micronode device.
Connection Timer*	The time that the modem must wait for a carrier signal after dialing. This value is in seconds. If the time expires before the carrier signal is received, the system redials. Valid entries are between 1 and 300 seconds. Set this field to 20 for the Datawire Micronode device.
Host IP Address	The IP address used to connect to the network. This information must be obtained from the Credit Card host or the <i>Managed Network Service Provider</i> . <i>Note: This field is used only if the site is configured as VSAT or VSAT with Dial Backup.</i>
IP Port	The IP port used to connect to the network. Obtain this from the network. <i>Note: This field is used only if the site is configured as VSAT or VSAT with Dial Backup. However, this field cannot be left blank. Enter "5001" if configured for Dial.</i>
Keep Alive time frame (minutes)	The default value is 10 minutes for the network.

*Dial parameters are only required if the site is configured as Dial or VSAT with Dial Backup.

- After completing all the fields on the **Network Connection Options** tab, select the **Store & Forward Parameters** tab.

Figure 15: Store & Forward Parameters Tab

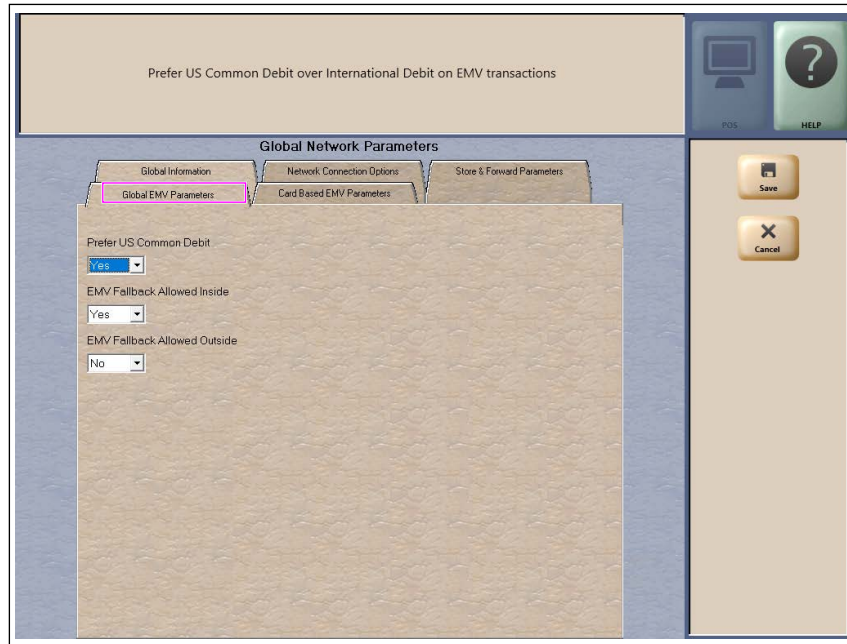

The screenshot shows the 'Store & Forward Parameters' tab within the 'Global Network Parameters' section. The interface includes a top header with a status message and a 'POS' button. The main area contains several input fields and a dropdown menu. The 'Store & Forward Warning Count Percent' field is set to 50. The 'Store & Forward Warning Total Percent' field is also set to 50. The 'Maximum Store & Forward Count' field is set to 0. The 'Maximum Store & Forward Total' field is set to 0. The 'Show Store & Forward Indicator' dropdown is set to 'Yes'. The 'Close Password' field is set to 123456. On the right side, there are 'Save' and 'Cancel' buttons.

Fields on the Store & Forward Parameters Tab

Field	Description
Store & Forward Warning Count Percent	When the Passport system stores a number of transactions that is this percentage of the maximum number of transactions allowed to be stored, the Passport system begins to display a warning message through the network events.
Store & Forward Warning Total Percent	When the Passport system stores a number of transactions that is this percentage of the maximum dollar amount of transactions allowed to be stored, the Passport system begins to display a warning message through the network events.
Maximum Store & Forward Count	The maximum number of transactions that the station is allowed to store. This value cannot be greater than 1500.
Maximum Store & Forward Total	The maximum dollar amount of transactions that the station is allowed to store. This value cannot be greater than \$99,999.
Show Store & Forward Indicator	This is a Yes/No field. If set to Yes, the Network button on the POS changes color when there is at least one stored transaction. For additional information, refer to "Checking the Network Status" on page 51.
Close Password	The six-digit value sent to the host for Shift or Day Totals Requests. <i>Note: This field is grayed out and not editable.</i>

- 6 After completing all the fields on the **Store & Forward Parameters** tab, select the **Global EMV Parameters** tab.

Figure 16: Global EMV Parameters

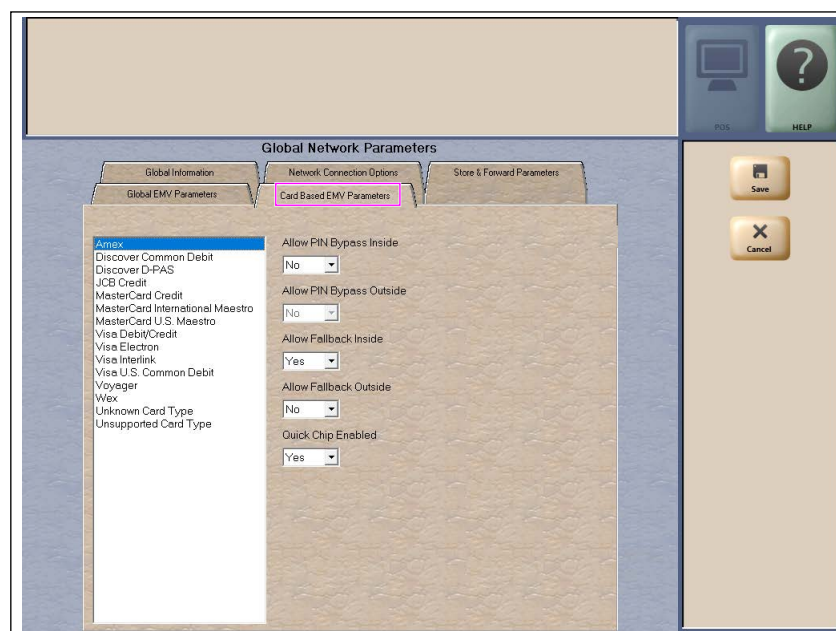

Fields on the Global EMV Parameters Tab

Field	Description
Prefer US Common Debit	<p>If set to Yes, when the customer presents an EMV card that contains both US Common and International Debit Application Identifiers (AID), Passport uses the US Common Debit AID. If multiple AIDs are supported and the customer selects US Debit AID, the customer is prompted for Credit or Debit.</p> <p>If set to No, under the same circumstances, Passport uses the International Debit AID, which is treated as a Credit card and Credit processing fees are charged. The customer is not given the option to select credit or debit.</p> <p>If the card contains only one debit AID, Passport uses it without regard to the setting for this field.</p>
EMV Fallback Allowed Inside	<p>This field controls if EMV fallback to magnetic stripe is allowed inside the store or not.</p> <p>If set to Yes, when the customer inserts an EMV chip card inside the PIN Pad chip reader, the PIN Pad detects the card AID but fails to read the chip. Passport uses the Allow Fallback Inside field value for the card AID (found on the Card Based EMV Parameters tab) to determine how to handle the card. For more information, refer to Card Based EMV Parameters Tab on page 24.</p> <p>If set to Yes, when the customer inserts an EMV chip card inside the PIN Pad chip reader, a chip read error occurs and the PIN Pad does not detect the card AID. Passport uses the Allow Fallback Inside field value for "Unsupported Card Type" to determine how to handle the card. For more information, refer to Card Based EMV Parameters Tab on page 24.</p> <p>If set to No, when the customer inserts an EMV chip card inside the PIN Pad chip reader and a chip error occurs, Passport declines the card.</p>

Field	Description
EMV Fallback Allowed Outside	This field behaves the same way as the “EMV Fallback Allowed Inside” flag, but for outside transactions.

- 7 After completing the **Global EMV Parameters** tab, select the **Card Based EMV Parameters** tab.

Figure 17: Card Based EMV Parameters Tab

The fields on this tab are used to set options for using EMV cards. To change the settings for an AID, select the AID name from the listing on the left and program the values in the fields to the right. The following new card types are added:

- Unknown Card Type - Controls fallback when the card reader is unable to read information off the chip card
- Unsupported Card Type - Controls fallback when the chip card is read, but Passport does not support the AID

This setting controls the fallback setting when an EMV card is used and the card reader is unable to read the chip and obtain any AIDs or the AID on the card is not supported by Passport. In such cases, if Allow Fallback is set to Yes, the card is processed as a magnetic stripe. If Allow Fallback is set to No, the transaction is declined. This applies both for inside and outside transactions.

Fields on the Card Based EMV Parameters Tab

Field	Description
Allow PIN Bypass Inside	<p>If set to Yes and the EMV application requires PIN entry, the inside PIN Pad prompts the customer to enter the PIN, but allows the customer to press the ENTER key on the PIN Pad without entering a PIN.</p> <p>If set to No and the EMV application requires PIN entry, the inside PIN Pad prompts the customer to enter the PIN and the customer must enter a PIN to move forward in the transaction.</p> <p><i>Note: This field is set to No for debit AIDs and the merchant cannot change the setting.</i></p>

Field	Description
Allow PIN Bypass Outside	<p>If set to Yes and the EMV application requires PIN entry, the CRIND prompts the customer to enter the PIN, but allows the customer to press the ENTER key on the CRIND keypad without entering a PIN.</p> <p>If set to No and the EMV application requires PIN entry, the CRIND prompts the customer to enter the PIN and the customer must enter a PIN to move forward in the transaction.</p> <p><i>Note: This field is set to No for debit AIDs and the merchant cannot change the setting.</i></p>
Allow Fallback Inside	<p>If set to Yes, when the customer inserts an EMV chip card into the chip reader of the inside PIN Pad and the PIN Pad detects the chip card AID but an EMV processing (first AC) error occurs, the PIN Pad prompts the customer to swipe the card and Passport performs fallback to magnetic stripe. If the PIN Pad cannot detect the chip card AID, Passport declines the card or allows fallback to magnetic stripe based on the value of the "EMV Fallback Allowed Inside" field in the Global EMV Parameters tab.</p> <p>If set to No, when the customer inserts an EMV chip card into the chip reader of the inside PIN Pad and a chip error occurs, Passport declines the card.</p> <p><i>Note: Passport does not allow fallback to magnetic stripe for EMV chip card transactions outside at the CRIND.</i></p>
Allow Fallback Outside	<p>This field behaves the same way as the "Allow Fallback Inside" flag, but for outside transactions.</p>
Quick Chip Enabled	<p>If set to Yes, Passport obtains all necessary EMV data from the chip card earlier in the transaction by notifying the chip card that the network is not available. Thus, the PIN Pad or CRIND prompts the customer to remove the chip card before the transaction has completed with the chip card issuer, up to a few seconds earlier.</p> <p>If set to No, Passport performs EMV transactions without the shortcut of Quick Chip processing. The PIN Pad prompts the customer to remove the chip card after the transaction has completed with the chip card issuer.</p> <p>Defaults to No.</p>

- 8 After completing the **Card Based EMV Parameters** tab, select **Save** to save all programming and exit from **Network Site Configuration**.

- 9 From the MWS main menu, select **Set Up > Network Menu > Concord > Network Card Configuration**. The Card Acceptance Information screen opens.

Figure 18: Card Acceptance Information Tab

The fields that display are dependent upon the card type selected from the list on the left side bar. Certain proprietary and SVC cards require additional parameters and will display.

- 10 Select a Card name from the list to view its Card Information.

Fields on the Card Acceptance Information Tab

Field	Description
Accept Card	If set to Yes, the card may be accepted as payment at the store.
Inside Floor Limit	For inside transactions, the maximum allowable dollar amount for transactions handled in fallback. This field cannot be greater than 999.
CRIND Floor Limit	For CRIND transactions, the maximum fueling amount allowable in fallback. This field cannot be greater than 999.
CRIND Authorization Amount	The dollar amount of the CRIND fueling limit that is requested from the Fiserv network for authorization. The Fiserv network responds with the authorized fueling limit amount, which may be greater or less than the requested amount. This field cannot be greater than 999.
CRIND Auth Control	The point at which the CRIND device is authorized after the customer swipes the card at the CRIND. Options are: <ul style="list-style-type: none"> On Card Identification On Host Transmission On Host Response

Field	Description
AVS ZIP Code Prompt	This field determines how ZIP Code prompting occurs. Options are: <ul style="list-style-type: none"> Both - AVS prompting occurs on inside and CRIND sales Inside - AVS prompting occurs only on inside sales Outside - AVS prompting occurs only on CRIND sales None - no AVS prompting occurs Default is None. AVS is available only if the AVS Enabled by Host field is set to Yes (prompt code 127) on the Global Information tab.
Can Use As Debit	If set to Yes, the card may be used as a Debit Card only on outside sales. If set to No, the card may not be used as a Debit Card.
Manual Entry Allowed	If set to Yes, the card information may be entered manually on an inside transaction.
Track Configuration	Track reading can be set to one of the following: <ul style="list-style-type: none"> Preferred Track 1 - track 1 of the magnetic stripe read is sent to the Fiserv network in each transaction; if track 1 is not on the card, track 2 is sent to the network Preferred Track 2 - track 2 of the magnetic stripe read is sent to the Fiserv network in each transaction; if track 2 is not on the card, track 1 is sent to the network Mandatory Track 1 - if track 1 of the magnetic stripe is not readable, the card is not accepted Mandatory Track 2 - if track 2 of the magnetic stripe is not readable, the card is not accepted
Signature Required Limit	The smallest total sales dollar amount at which the customer must provide signature for the transaction. For EMV chip card transactions, this is the Cardholder Verification Method (CVM) limit.

Figure 19: Card Acceptance Information for SVC

The screenshot shows the 'Card Acceptance Information' configuration window. On the left is a scrollable list of card types, with 'Stored Value Card 1' highlighted. The main panel contains the following settings:

- Accept Card: No
- Inside Floor Limit: 0
- CRIND Floor Limit: 0
- CRIND Authorization Amount: 50
- CRIND Auth Control: On Host Response
- AVS Zip Code Prompt: None
- Can Use As Debit: No
- ISO:
- Perform MOD Check: No
- MOD Check Calculation Start Position:
- MOD Check Calculation Length:
- MOD Check Digit Position:
- Account Number Length:
- Manual Entry Allowed: Yes
- Track Configuration: Preferred Track 2
- Signature Required Limit: 0.00

On the right side of the window are 'Save' and 'Cancel' buttons. The top right corner has icons for 'POS' and 'HELP'.

Fields on the Card Acceptance Information SVC Tab

Field	Description
Accept Card	If set to Yes, the card may be accepted as payment at the store.
Inside Floor Limit	For inside transactions, the maximum allowable dollar amount for transactions handled in fallback. This field cannot be greater than 999.
CRIND Floor Limit	For CRIND transactions, the maximum fueling amount allowable in fallback. This field cannot be greater than 999.
CRIND Authorization Amount	The dollar amount of the CRIND fueling limit that is requested from the Fiserv network for authorization. The Fiserv network responds with the authorized fueling limit amount, which may be greater or less than the requested amount. This field cannot be greater than 999.
CRIND Auth Control	The point at which the CRIND device is authorized after the customer swipes the card at the CRIND. Options are: <ul style="list-style-type: none"> • On Card Identification • On Host Transmission • On Host Response
AVS ZIP Code Prompt	This field determines how ZIP Code prompting occurs. Options are: <ul style="list-style-type: none"> • Both - AVS prompting occurs on inside and CRIND sales • Inside - AVS prompting occurs only on inside sales • Outside - AVS prompting occurs only on CRIND sales • None - no AVS prompting occurs Default is None. AVS is available only if the AVS Enabled by Host field is set to Yes (prompt code 127) on the Global Information tab.
Can Use As Debit	If set to Yes, the card may be used as a Debit Card only on outside sales. If set to No, the card may not be used as a Debit Card.
ISO	This field is displayed for SVC and Generic Proprietary cards only. This field must be six digits in length for SVC and up to six digits for Generic Proprietary cards. This field sets the prefix of the personal account number for the Passport system to recognize the configured card type.
Perform MOD Check	If set to Yes, Passport performs Luhn MOD 10 check on the card data. Set to Yes for SVC. Defaults to No. If set to No, the subsequent fields are grayed out and inaccessible.
MOD Check Calculation Start Position	Configure this field only if Perform MOD check is set to Yes. This field determines at which digit position the MOD 10 Check calculation must begin.
MOD Check Calculation Length	Configure this field only if Perform MOD check is set to Yes. This field determines the length of the MOD 10 check. Default is 00.
MOD Check Digit Position	Configure this field only if Perform MOD check is set to Yes. This field determines the position of the MOD 10 check. Default is 00.
Account Number Length	This field is used to set the length of the personal account number a card should have to be recognized as belonging to the configured card type.
Manual Entry Allowed	This is a Yes/No field. If set to Yes, the card information may be entered manually on an inside transaction.
Track Configuration	Track reading can be set to one of the following: <ul style="list-style-type: none"> • Preferred Track 1 - track 1 of the magnetic stripe read is sent to the Fiserv network in each transaction; if track 1 is not on the card, track 2 is sent to the network • Preferred Track 2 - track 2 of the magnetic stripe read is sent to the Fiserv network in each transaction; if track 2 is not on the card, track 1 is sent to the network • Mandatory Track 1 - if track 1 of the magnetic stripe is not readable, the card is not accepted • Mandatory Track 2 - if track 2 of the magnetic stripe is not readable, the card is not accepted
Signature Required Limit	The smallest total sales dollar amount at which the customer must provide signature for the transaction.

- 11** Select **Save** to save changes or **Cancel** to exit the Card Acceptance Information screen without saving changes.

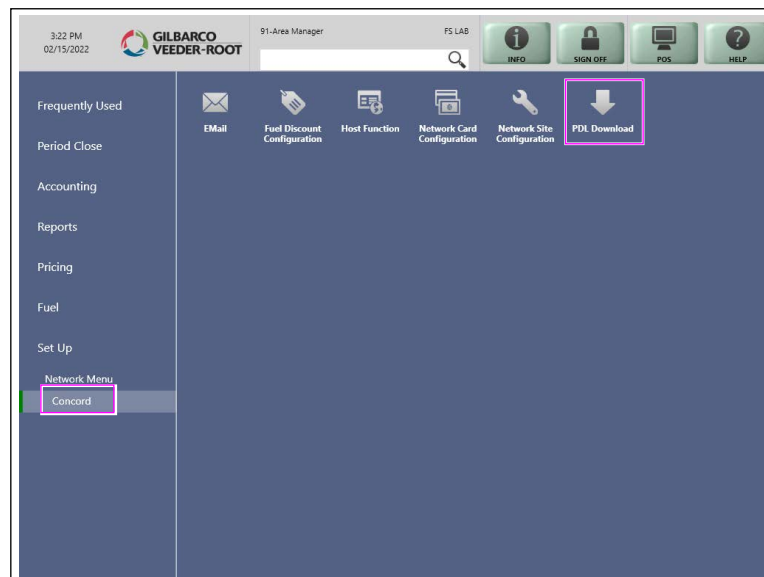

Requesting PDL Download

A PDL is a transfer of data from the Fiserv network to the Passport system. Call the network to have the download flag set; otherwise, the download will fail.

To request a PDL download, proceed as follows:

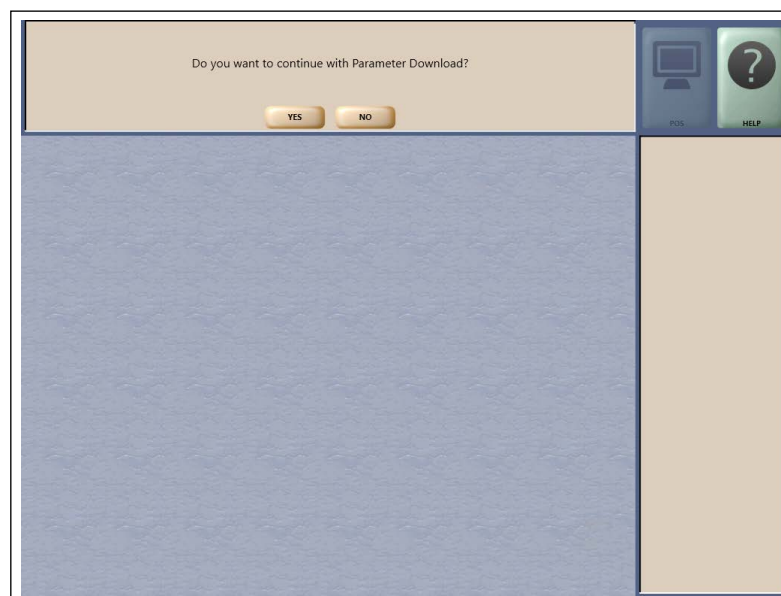

- 1 From the MWS main menu, select **Set Up > Network Menu > Concord > PDL Download**.

Figure 20: PDL Download

- 2 Passport prompts “Do you want to continue with Parameter Download?”.

Figure 21: PDL Download Screen

- a** If you select **No**, the system returns to the **Network Menu** screen.
 - b** If you select **Yes**, Passport requests two downloads; first the Site Control Load, followed by the Card Table Load. As Passport requests each download, the MWS screen displays the status, including the reason for any failure. A failure status for the Site Control Load is not an issue, unless you notified the network to set the Download Flag before requesting the PDL download.
- 3** If the download is unsuccessful, perform the following and then retry the download:
- Validate the Merchant Number.
 - For VSAT connection:
 - Validate the IP port number.
 - Verify the Firewall Router configuration.
 - Ping the Host IP address to verify hardware connectivity.
 - For Dial Connection:
 - Validate the download number.
 - Ensure the download flag is set by contacting the Fiserv Help Desk (1-800-726-2629).
 - Consider the following:
 - Perform a Communications Test.
 - Perform a Mail Request.
 - Perform a Mail Reset.

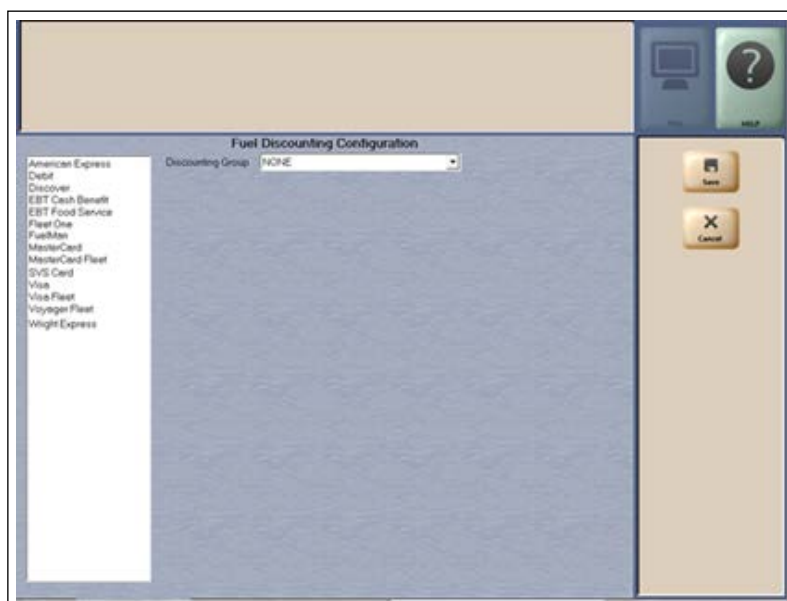

For more information, refer to the [“Troubleshooting”](#) section on [page 52](#).

Fuel Discount Configuration

To configure fuel discounts by card type, proceed as follows:

- 1 From the MWS main menu, select **Fuel > Fuel Discount Maintenance**. On the **Fuel Discount Groups** tab, configure PPU discounts to be applied to fuel grades available at the store.
- 2 From the MWS main menu, select **Set Up > Network Menu > Concord > Fuel Discount Configuration**. The Fuel Discounting Configuration screen opens.

Figure 22: Fuel Discounting Configuration

- 3 Select the desired card type in the left pane. From the drop-down list, select the **Discounting Group** to be applied to that card type.
- 4 Select **Save**, to save your changes.

Network Journal Report

This report shows network journal entries for regular network transactions, as well as settlement and communication issues. The Network Journal Report configuration screen allows you to filter by various criteria, such as Date and Time, Exceptions, Source, Journal Type, and specific Journal Text. The store manager can use the Network Journal Report as an aid in searching for disputed transactions.

Figure 23: Network Journal Report Screen

Passport identifies EMV transactions by using the “EMV Chip transaction” value in the “Type” column of the Network Journal Report. To search for disputed EMV transactions, use “EMV Chip transaction” in the Journal Text field to filter out all other transaction types. EMV Chip transaction entries include special information in addition to that printed on the customer receipt. This information is especially important when disputing an EMV transaction charge back.

Network Reports

Network reports show data on Credit and Debit card transactions transmitted to the network. Some network reports provide information on the status of transactions while others list the total amounts for transmitted transactions.

You may view the network reports on the MWS in the **Reports > Network Reports** menu. The following Fiserv network reports are available:

Field	Shift Close	Store Close	Current	Secure	Configure

¹ If the store sells Cash Cards, print this report at each Store Close for settlement.

² Print this report at each Store Close and read carefully. Items that appear on this report may require manual reconciliation with the network. Manually print the secure version if needed for reconciliation issues.

Account Transactions by Day

This report provides summary information of each network transaction that occurred during a given Business Day. The information includes:

- Date and Time the transaction occurred
- Masked card account number
- Card expiration date (obtained from the track data or manually entered by the customer)
- Transaction amount
- Card account type
- Transaction type
- Terminal Type (POS or CRIND) where the transaction occurred
- Terminal # where the transaction occurred
- Approval value returned by the network
- Invoice # for the transaction
- Summary data which includes:
 - Local totals for count and dollar amount for each card type
 - Outstanding pre-authorizations, which are not counted in the final card totals
 - Summary totals for count and dollar amount for the complete Business Day period

Pre-authorizations are not listed in the detail entries; only the Completion is listed.

The secure version of this report uses the same format, except the card account numbers print unmasked. Secure reports are password protected and available only on demand.

* These categories are excluded from the grand totals (Card Totals)

Account Transactions by Shift

This report provides summary information of each network transaction that occurred during a specific Shift of a given Business Day. The information includes:

- Date and Time the transaction occurred
- Masked card account number
- Card expiration date (obtained from the track data or manually entered by the customer)
- Transaction amount
- Card account type
- Transaction type
- Terminal Type (POS or CRIND) where the transaction occurred
- Terminal # where the transaction occurred
- Approval value returned by the network
- Invoice # for the transaction
- Summary data which includes:
 - Local totals for count and dollar amount for each card type
 - Outstanding pre-authorizations, which are not counted in the final card totals
 - Summary totals for count and dollar amount for the complete Shift period

Pre-authorizations are not listed in the detail entries, only the Completion is listed.

The secure version of this report uses the same format, except the card account numbers print unmasked. Secure reports are password protected and available only on demand.

Card Conflict Report

This report provides information on transactions in which the Passport system incorrectly recognized an Auxiliary Network card as a card accepted by the primary network or incorrectly recognized a card accepted by the primary network as an Auxiliary Network card. Use the report to aid in identifying incorrectly configured Auxiliary Network cards in **MWS > Set Up > Network Menu > Auxiliary Network**.

EMV/Chip Fallback Report by Day

This report provides summary information on the count and percentage of EMV chip card transactions Passport processed according to Fallback rules for a specific network day.

Figure 31: EMV/Chip Fallback Report by day

EMV/Chip Fallback Report		
Merchant Number: FG13311194001		
Network Day #1 From 01/30/2017 12:25:22PM to 01/31/2017 10:21:22AM		
TOTAL EMV/CHIP CARD TRANSACTIONS: 0		
FALLBACK TOTAL	TRANS 0	% OF CHIP TRANS 0%

EMV/Chip Fallback Report for Current Day

This report contains summary information similar to the EMV/Chip Fallback Report by Day, except for the current open network day. The report can be viewed and printed on demand.

Local Totals for Current Day

This report provides summary totals regarding transactions that have occurred during the current open Business Day. The information includes:

- Summary count and dollar amount of each card type category represented in the current open Business Day
- Sum of counts and dollar amounts for all card type categories in the current open Business Day (certain card type categories are not included in these totals)
- Summary count and dollar amount of all transactions currently outstanding in the Store and Forward queue
- Summary count and dollar amount for all uncollected transactions that have occurred in the current open Business Day
- Special information or instructions regarding certain entries in the report

Figure 32: Local Totals for Current Day Report

Network Performance

This report provides information on each message exchanged between the Passport system and the network. Entries are in descending order (most recent first). The information includes:

- Connection Type used for the message exchange (TCP or Dial)
- Date and Time of the message exchange
- Event Name
- Additional Data, which may include:
 - Message type number
 - Duration
 - Network sequence number assigned the transaction

POS Day

This report provides a comparison of summary network transaction data the Passport system tracks with similar transaction data received from the network for a given Network Day. The store manager or merchant may use the report to assist in reconciling the network day. The information includes:

- Entries by card type category for:
 - Local Count: summary count of transactions tracked by Passport
 - Local Dollars: summary dollar amount tracked by Passport
 - Host Count: summary count of transactions tracked by the network
 - Host Dollars: summary dollar amount tracked by the network
 - Difference Dollars: difference between Local Dollars and Host Dollars
- Summary totals for Network Day
- Summary count and dollar amount of all transactions in the Store and Forward queue at Network Day Close
- Summary count and dollar amount of all uncollected transactions at Network Day Close
- Special information or instructions regarding certain aspects of the report, such as explanation for N/A entries under Host data columns, card type categories excluded from store totals, other reports to print to assist in reconciliation. For instance, if the count and dollar amount for Total S&F transactions outstanding are not zero, the report instructs the reader to print the Local Totals for Current Day report. Or if the count and dollar amount for the Total uncollected transactions are not zero, the report instructs the reader to print the Uncollected Transactions by Day report.

POS Host Refusal

This report provides information on transactions for which the network declined the payment the customer presented. The report is available in secure and non-secure versions. The secure version requires entry of the secure password to view or print the report. The non-secure version of the report prints or displays each account number masked, except the last four digits, and the expiration date fully masked. The information includes:

- Date and Time of the transaction
- Dollar amount of the transaction
- Card account number
- Card expiration date
- Card Type
- Authorization number returned by the network
- If the network responded with Call for Auth, the Call for Auth number
- Indication whether the card account number was manually entered
- Response code returned by the network
- Decline or refusal message

POS Shift

This report provides a comparison of summary network transaction data Passport tracks with similar transaction data received from the network for a given Shift. The store manager or merchant may use the report to assist in reconciling the network totals. The information includes:

- Entries by card type category for:
 - Local Count: Summary count of transactions tracked by Passport
 - Local Dollars: Summary dollar amount tracked by Passport
 - Host Count: Summary count of transactions tracked by the network
 - Host Dollars: Summary dollar amount tracked by the network
 - Difference Dollars: Difference between Local Dollars and Host Dollars
- Summary totals for the Shift
- Summary count and dollar amount of all transactions in the Store and Forward queue at Shift Close
- Summary count and dollar amount of all uncollected transactions at Shift Close
- Special information or instructions regarding certain aspects of the report, such as explanation for N/A entries under Host data columns, card type categories excluded from store totals, other reports to print to assist in reconciliation. For instance, if the count and dollar amount for Total S&F transactions outstanding are not zero, the report instructs the reader to print the Local Totals for Current Shift report. Or if the count and dollar amount for the Total uncollected transactions are not zero, the report instructs the reader to print the Uncollected Transactions by Day report.

Store and Forward Transactions

This report provides information on all transactions currently in the Store and Forward queue awaiting retransmission to the network. The report is available in secure and non-secure versions. The secure version requires entry of the secure password to view or print the report. The non-secure version of the report prints or displays each account number masked, except the last four digits, and the expiration date fully masked. The information in the report includes:

- Date and Time of the original transaction
- Card account number
- Expiration date
- Terminal number at which the transaction occurred
- Invoice number the Passport system assigned to the transaction
- Transaction dollar amount
- Summary total count and dollar amount

Figure 42: Store and Forward Transactions Report

Store and Forward Transactions Report

Merchant Number: L31300352010

Report created: April 23, 2017 5:53:25AM

Date	Time	Account/Speedpass #	Card Type	Exp. Date	Terminal #	Invoice #	Amount
2017-11-22	1:23:43AM	1234567890123456	Mastercard	12/20	POS 2	000023	\$49.32
2017-11-22	11:43:01PM	1234567890123456789	Speedpass		CRIND KIOSK 1	000076	\$1956

A + sign beside the account number indicates repeated card use.

Totals	Count	Amount
	2	\$68.88

This report provides information on transactions currently pending in Store and Forward for completion with the First Data network. These Store and Forward transactions may have initiated in previous network periods now closed. This report is intended to be used for informational purposes only and not for network reconciliation or business accounting.

Uncollected Transactions by Day

This report provides information on all transactions that received a pre-authorization approval from the network (or occurred while the Passport system was offline with the network but for which the card type parameters allow offline approval) but the network declined at Completion. This report may assist the store manager or owner in making a manual request for payment.

The report is available in secure and non-secure versions. The secure version requires entry of the secure password to view or print the report. The non-secure version of the report prints or displays each account number masked, except the last four digits, and the expiration date fully masked. The information includes:

- Date and Time of the transaction
- Invoice number the Passport system assigned to the transaction
- Authorization number received from the network or generated by the Passport system (for offline transactions)
- Card account number
- Card expiration date
- Card Type
- Transaction dollar amount

CWS Network Functions

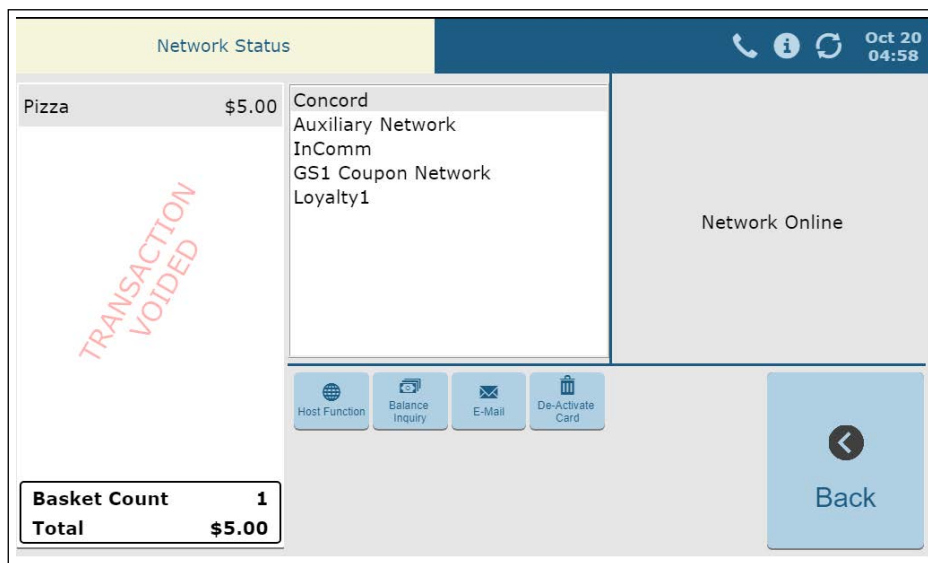

The Network Functions screen contains the Network Status window and Network Functions buttons. It can be accessed by selecting the Network button on the cash register screen.

Figure 44: Network Status Button

After selecting the Network button, the Network Status screen opens.

Figure 45: CWS Network Status

The Network Status screen provides information on all networks connected to the Passport system. Select a network from the list in the middle pane to display its status in the right pane.

Checking the Network Status

The Network Status screen allows you to view a record of network events such as communication errors that occurred. Each network event is assigned a severity rating (low, medium, or high). When a new event occurs, and Passport adds it to the list, Passport also updates the **Network Status** button. The color of the **Network Status** button indicates the severity of the rating of the event:

Color	Severity
Blue	Low
Yellow	Medium
Red	High

If multiple events occurred, the color of the **Network Status** button indicates the highest severity rating of the events. The **Network Status** button color changes when an event is corrected or after a pre-determined time.

The following table provides some of the network messages that may display:

Message on Network Functions Screen	Network Status Indicator Color	Comments
NETWORK OFFLINE	Yellow	The network is offline.
PDL RECEIVED	Blue	PDL was received successfully.
UNREAD MAIL AVAILABLE	Blue	The Passport system received mail from the network.
STORED & FORWARD WARNING	Yellow	The Passport system has reached the value set in the MWS for Store & Forward Warning Percent.
STORED & FORWARD FULL	Red	The Store & Forward Queue is at least 90% full.

In addition, the Network Functions screen also provides buttons for specific network requests. The following table describes the Network Functions buttons and their behavior:

Button	Behavior
E-Mail	This function allows you to retrieve electronic messages received through the network. All emails are saved for 60 days.
Host Function	This function allows you to perform: <ul style="list-style-type: none"> • Communications Test • Mail Request • Mail Reset The results of the request display on the CWS yellow bar.
De-Activate Card	Deactivate an activated cash card through the network. A refund for an original transaction that included purchase and activation of one or more cash cards automatically prompts the cashier for deactivation of the purchased cards. Do not use the De-Activate Card function if refunding a transaction that included activation or recharge of cash cards.
Balance Inquiry	Obtain current balance of a cash card and print a receipt showing the balance for the customer.

Troubleshooting

Concord Network Settings

If you are unable to get a download, perform the following:

- Verify that the network has the Communication Type set properly. It will be set for Dial or VSAT. Ensure that the setting matches the configuration being used at the site.
- Observe the status messaging that displays on the MWS screen when you perform the PDL download. The Passport system requests two downloads, first the Card Table Load and then the Site Control Load. As the Passport system requests each download, the MWS screen displays the status, including the reason for any failure.
- When performing the PDL Download, if the MWS screen indicates the Site Level Load failed, verify that the network has the Download Flag turned on. The network resets the Download Flag each time the Passport System receives a PDL Download and the download is not successful.

If you are unable to perform a Store Close, retrieve, and review the Network System Events Report. This report contains detailed information to be provided to the Help Desk when reporting the issue.

*Note: To view the Network System Events Report from the MWS, select **Reports** > **Network** > **Network System Events** > **Print Preview**.*

Appendix B: Enabling Dual Encryption for Passport

This section provides instructions to enable dual encryption for sites on the network that have SDES keypads at the CRIND devices and TDES PIN Pads inside.

Notes: 1) This procedure must be performed by a Gilbarco-certified ASC only.

2) The network does not support the opposite configuration, that is, TDES at the CRIND and SDES inside.

To enable dual encryption, proceed as follows:

- 1** After the required upgrades are completed, contact the Fiserv Technical Support Help Desk 1-800-733-3322.
- 2** Provide the six-digit Merchant ID Number to the Fiserv Technical Support Help Desk representative.
- 3** Request the Fiserv Technical Support Help Desk representative to change the Encryption Type field on the site profile to “X” to enable the dual encryption functionality. After the change is completed, the Fiserv Technical Support Help Desk representative will end the call.
- 4** Perform test transactions inside at the POS and at a CRIND to ensure proper operation. If the test transactions are not successful, contact the Fiserv Technical Support Help Desk again and request the representative to change the Encryption Type field back to its original setting.

Appendix C: Upgrading to Passport V22

This section provides Fiserv specific information to the ASC when upgrading from a Passport version which has been defined as an approved upgrade path.

IMPORTANT INFORMATION

Ingenico PIN Pad End of Support

Due to end of life of the Ingenico iSC250 and iPP320 PIN Pads, these devices were not certified with the Fiserv network for Passport V22. When upgrading to V22, Passport will check to see if an Ingenico PIN Pad is connected. If one is detected, the following error message will be displayed. **“The system has detected an Ingenico PIN Pad which is no longer approved by the credit network. Please replace with VeriFone (MX915, M400, and P400) or contact Technical Support at 1-800-743-7501”**, and the upgrade will be aborted. For a clean installation of V22, Ingenico will not be an option on the Register Set Up screen.

Before beginning the upgrade:

The ASC must perform the following steps before the upgrade:

Step	Task Description
1	Ensure all dispenser software and firmware meet applicable requirements to support loyalty and other fuel discounting functionality (including support of \$0.000 PPU).
2	Print the Network Configuration Report . This will be helpful if a clean install is required and to confirm all network settings (including Host Connection Type and other parameters in Global Information)
3	Perform Store Close and ensure all network transactions have completed by checking the Store and Forward Transactions Report for fallback transaction information.
4	Call the Fiserv Help Desk at 1-800-726-2629 to ensure the Store Close is successful. If enabling EMV for the first time, confirm the Fiserv network is prepared to enable EMV downloads for inside and outside transactions.
5	Assist the merchant or store manager to print additional accounting and network reports as needed.
6	Ensure all file transfers from Passport to the BOS have completed.

After the upgrade:

The ASC must perform the following steps after the upgrade:

Step	Task Description
1	If enabling EMV for the first time, request a PDL Download by going to MWS > Set Up > Network Menu > Concord > PDL Download . For more information on requesting a PDL Download, refer to “Requesting PDL Download” on page 29 .
2	If enabling EMV for the first time, review the parameters on MWS > Set Up > Network Menu > Concord > Network Site Configuration , on the Global EMV Parameters tab and the Card Based EMV Parameters tab with the store owner or store manager. Advise him to contact the Fiserv Help Desk to discuss the financial implications and suggested settings on this screen.
3	If installing a VeriFone MX915, M400, and P400 PIN Pad after the upgrade, ensure that the EMV Capable field is selected in MWS > Set Up > Register > Register Set Up > Device Configuration .

If the store manager or owner has operational questions outside Passport behavior, refer him to his Fiserv representative.
