Provide the Best Food Ordering Experience for Your Customers

Why make customers place an order at a kiosk and then have them stand in another line to pay for it? Upgrade to the latest Passport software release to streamline operations and enhance your customer's experience!

Beginning with Passport v21.03 and Maintenance Pack 22 or higher, you can give your customers more control over their shopping experience and reduce stress on your cashier lines. **Now customers can order and pay for food at the same kiosk.**

NEW! Express Ordering also accepts orders through delivery service apps. This is made possible via Xpedient's integration with Paytronix and Vroom Delivery.

But wait, there's more! By adding Express Lane™ Self-Checkout you can improve your customers' experience and store efficiency by giving customers the option to pay for all c-store items and fuel at that same kiosk. Now you truly have a self-service c-store environment.

Mininum Requirments: Server with Solid State Drive with Windows 10 is required. Sites with a MicroPlus server will need to be replaced.

Key Benefits

- One-stop order and pay for food
- Pay for food, c-store items, and fuel
- Alleviate long lines
- Increase staff productivity

FREE Foodservice Suite from Gilbarco and up to a 25% discount from Xpedient if upgraded by December 31, 2023. *Xpedient software support for earlier versions will end December 31, 2023.*
