

AutoGas Storemaster and Gilbarco Dispenser Systems

Veeder-Root Hardware Requirements

The following equipment is required to interface the TLS to the AutoGas Storemaster system:

- One Gilbarco Interface Module (for up to 3 current loops)
- One installation kit for each current loop other than RS-422/RS-485 OR One Gilbarco installation kit for each RS422/RS-485 current loop (see Table 1 on page 5)

Gilbarco POS and Dispensing System Requirements

- Gilbarco Dispenser Distribution Box PA-2420000000
- Gilbarco Dispenser Distribution Box PA02610000010
- Gilbarco Dispenser Distribution Box PA02610000020
- Gilbarco Dispenser Distribution Box PA0281XXXXXX0

An AutoGas 507 controller is required with the AutoGas Storemaster POS.

System Limitations

- Up to 36 Gilbarco single product or blending fueling positions are supported.
- Only Gilbarco dispensers are supported.
- The Gilbarco current loop dispenser interface module does not support Gilbarco G-Site applications.

The Cable Adaptor Box install kits are designed to be installed on either a Gilbarco 2-wire distribution box input using 9-pin 'D shell' style connectors or a Gilbarco RS-422/RS-485 input to the distribution box, also using 9-pin 'D shell' style connectors.

To identify the distribution input communication type, refer to the Gilbarco Universal Distribution Box Installation Manual (MDE2713) noting the position choices for jumper 12 and 10 on the Universal Distribution Box Card which is communicating to the PAM, POS, or computer controlling the hydraulic dispenser status. Both of these jumpers should be in the horizontal position. (If vertical, the pump input is RS-422 and that kit should be used [see Table 1 on page 5]).

Installation Notes

Example wiring diagrams are shown in Figure 6 to Figure 9 below.
