

Maintenance Tracker and History

Improve ATG Access Control and Compliance Reporting

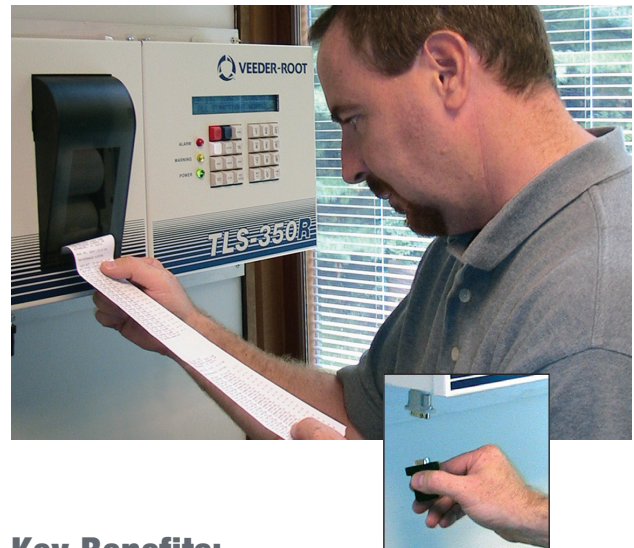

Veeder-Root introduces the Maintenance Tracker and History feature with the latest release of TLS 350 software V27.

Maintenance Tracker:

- Console validates service contractor's certification by verifying expiration date on a technician key before allowing protected alarms to be cleared
- Protected alarms remain on the display until a contractor logs-in and acknowledges them:
 - Sump Sensor Alarms, including Mag Sump Sensor
 - Position Sensitive Sensor Alarms
 - Input Alarms

Enhanced Alarm and Service History:

- Console provides a three-year rolling history of protected and compliance alarms
- All technician log-ins/log-outs
- All service events with codes
- Last 12 monthly tank and line leak tests

Key Benefits:

- Addresses concern over uncontrolled access to critical ATG functions
- Meets regulator requirements to prevent unauthorized tampering with ATG and critical sensors
- Increased history storage from last ten events to three years, including last 12 monthly leak test reports
- Easy print-out of alarm and event history expedites diagnosing and regulatory auditing process

Specification Guide

Scenario	New parts needed	Part Number	Quantity
Software			
Current Version 24 and later	Software upgrades (ROM) and NVMEM 203	331500-322	1 per console
Current Version 23 and earlier	Software upgrades (ROM) with ECPU2 and NVMEM 203	331500-358	1 per console
Comm Modules			
Dual Port	Dual Port Module, DB9 w/MT	330586-017	1 per console
	Single Port Module, DB25 w/MT	329362-005	1 per console
Technician Key			
Only for Service Contractors	Maintenance Tracker Field Support Kit	330020-546	1 kit per certified engineer
