

More control. Less effort. Better results.

Statistical Inventory Reconciliation (SIR)

SIR is a stand-alone leak detection method for underground storage tanks (USTs) that uses daily inventory, sales and delivery information to provide a certified monthly compliance result. SIR is recognized within the petroleum industry as one of the most efficient and cost effective means available for UST leak detection and regulatory compliance.

Gilbarco Veeder-Root's UstmanSIR system provides your management with up-to-date information on leak detection compliance. And you'll know quickly if there are any issues with your equipment or inventory. SIR analyzes the tank and connected piping system together to provide an accurate and dependable report on leak detection compliance, inventory and system status.

The UstmanSIR System sets the standard for UST Leak detection. It was the first certified SIR program to pass the Environmental Petroleum Agency protocol in 1990. Our leadership in SIR technology, combined with superior customer service, makes the Ustman system your best choice. Let us lead you through the complexities of EPA compliance.

UstmanSIR

The leader in SIR technology

- > First SIR system to be 3rd party certified (1990)
- > An economical means of leak detection
- > Improves fuel management
- > Requires no new equipment
- > Superior customer service

What is SIR?

Combines sophisticated statistical equations with computer processing power to determine the integrity or tightness of a tank system

Provides both federal and state EPA compliance for USTs and Piping

- > Standalone method of leak detection
- > Accepted for compliance in over 45 states
- > 3rd party certified
- > Certified to 60,000 gallon capacity
- > No limitations on throughput

The environmental benefits of SIR

- > Qualifies owners for environmental insurance protection
- > Helps owners detect leaks, potentially avoiding extensive environmental damage
- > Meets federal and state EPA requirements

Innovative online solutions (FMS Online)

- > Online inventory tool for monthly inventory data entry
- > Online regulatory SIR compliance and management reporting
