VEEDER-ROOT

<u>Marketing Sales Release</u>
Software Release Version 8T
TLS-450PLUS and TLS4 Series Consoles

1.0 Purpose

This Marketing Sales Release (MSR) announces the release of version and 8T software for TLS450PLUS and TLS4 Series consoles.

2.0 Description and Overview

The Veeder-Root strategy is to provide software releases on a regular cadence in order to furnish additional functionality, inclusion of customer requests, security updates and other enhancements in a timely manner. The following information outlines the modifications in this release.

3.0 Features and Benefits

a. Print All System and Tank Set up:

   i. Software feature added to allow users to print all the TLS system set up and tank setup parameters with a single command. All setup is generated in a consistent format.

   ii. To access these features, go to Setup > Print all Setup screen on the GUI and Web.

b. Implementation of Routing Tables

   i. Networks are separated from each other by specialized hosts called gateways or routers. Packets are sent to the appropriate outgoing interface, according to their destination and a set of rules and performance metrics. These rules are contained in the routing table, which is usually maintained by the network administrator. The aim is to control the path (the route) through which the packets are sent so you can isolate secure and insecure traffic to find an efficient path within a secure environment.

   ii. One application for this feature is when your company has a closed network that they want to access all devices from. This feature lets you turn off a "default" gateway using the rules created on this screen, so you can route packets only within that network.

   iii. To access these features, go to Setup > Communication > Routing

c. Release also includes minor bug fixes

4.0   Release Schedule

Veeder-Root recommends keeping console software upgraded to the latest version. These software releases may address issues or vulnerabilities that could cause problems in currently installed gauges. **We recommend TLS450PLUS and TLS4 Series customers upgrade to the latest version of software available.**

Version 8T consoles started shipping January 30, 2019

The TLS-450PLUS and TLS4 Series software upgrades can be downloaded directly from the veeder.com site by following this link:

https://www.veeder.com/us/automatic-tank-gauge-software-download

Software upgrades can also be ordered on a USB Flash drive at no charge for a limited time by ordering the software kit part number 330020-744

As a best practice when upgrading software, Veeder-Root recommends verifying that the Universal Sensor Module (USM) and Input/Output Module (IOM) are operating with the latest firmware version. Instructions for a USM or IOM firmware update can be found in *Continuing Education Bulletin 2015-08B, Firmware Upgrade*.

5.0   Documentation

Manual information can be obtained from our technical document library by following this link:
