

## Daily Flow Monitoring

Automatically calculates daily flow rates with reporting to web or email.

Daily Flow Monitoring Service helps maintain maximum flow rates for the fastest throughput and happier customers. This automated service reports precise daily flow rates by grade and fueling position.

Daily Flow Monitoring can also help control sites better, especially during peak fueling times. The Monitoring Service calculates real flow rates by compensating for dead times after authorization and fill-up, instead of arbitrary methods offered by some POS systems.

Daily Flow works with all major brands of gas pumps using patented technology that leverages your investment in existing Veeder-Root TLS systems. If you're already an FMS subscriber, Daily Flow helps to maximize your FMS capabilities.

Whether you have one site or dozens, Daily Flow Monitoring Service saves money -- for every fueling position -- with fewer service calls and less dispenser downtime. You'll also get reports about precise flow rates each day, emailed to your desk or handheld PC, or via the Web at FMSOnline.

### Designed for easy start-up!

It's easy to get started with Daily Flow Monitoring. For new customers, it's as simple as placing a product order. You'll also get access to other FMS services including Inventory Control and Planning, Compliance Reporting, and Alarm Reporting, with little or no additional equipment investment.

For existing FMS customers, all you'll need is a simple upgrade to the TLS-350 platform to get started.

Full warranty coverage may be added to any equipment or accessories for Daily Flow Monitoring.

### Daily Flow Monitoring service features

- Web-based reporting by grade and by fueling position
- Site network support
- Automated remote polling
- Graphically-illustrated flow summary reports
- Daily trend analyses for past 7 days
- Customer-defined low-flow threshold
- Low flow alarms per fueling position

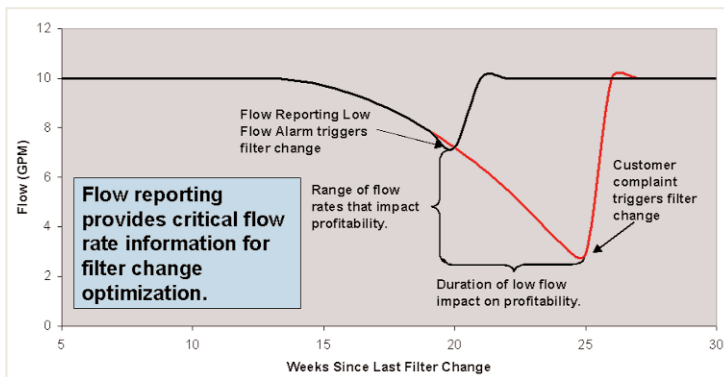

### System requirements

- Dispenser interface module and installation kit
- TLS-350R with ECPUII
- BIR software module
- Remote access via SiteFax Modem, Ethernet, I/P (internet)
- FMS dispenser mapping procedure

Call your local distributor, or dial 1-888-561-7942.

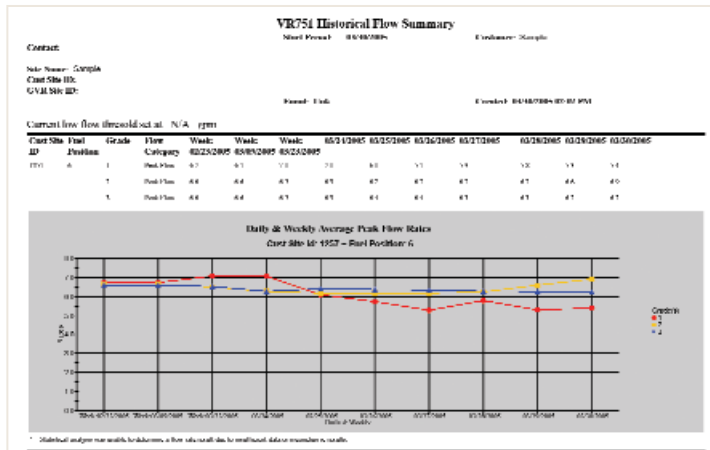

## Daily Flow Monitoring Service

Helps maintain the highest flow rate to maximize throughput and keep customers fueling faster.

Lets you know when a filter needs changing, to keep your fuel flowing fast at every fueling position on every dispenser.

Helps manage site control especially during peak fueling times.

Calculates real flow rates by compensating for dead times after authorization and fill-up, instead of arbitrary methods offered by some POS systems.

Works with all major brands of gas pumps using patented technology.

Helps you gain maximum benefit from both your TLS-350R and FMS with minimal investment.
