**Date:** June 30<sup>th</sup>, 2016  
**From:** Jason Bertinetti, Payment Product Marketing Manager

**Subject:** FlexPay Connect v2 Product Launch

---

Gilbarco Customers and Distributors,

Gilbarco will be launching an updated version of its FlexPay Connect product called FlexPay Connect v2. The new configuration will entail an updated backroom communications module, BRCM2, and an updated dispenser communications module, DCM2. Following the release of the DCM2 and BRCM2, all new site installations will be supported with these components, and the current DCM and BRCM will only be available as spare part replacements. All dispensers and retrofit kit orders calling for the original FlexPay Connect will be converted to FlexPay Connect v2 as of **July 11<sup>th</sup>**.

**Important Note:**

FlexPay Connect v2 uses a different broadband technology and is **not backwards compatible** to the current FlexPay Connect product. An entire site must use either FlexPay Connect or FlexPay Connect v2 – FlexPay Connect and FlexPay Connect v2 **cannot be mixed** at a site. Our ordering system is in the process of being updated to reflect the changes. Your Customer Service Representative will convert your Purchase Order to the FlexPay Connect v2 products while Web Order Wizard is being updated. If you have a current order in the system and need the order to ship with the original FlexPay Connect component(s), please contact your CSR immediately. This situation would arise if you are ordering a dispenser or retrofit kit for an existing site that has already installed a BRCM or DCM.

**New Benefits of FlexPay Connect v2**

- Simplified Backroom Hardware
  - o The BRCM2:
    - includes the functionality to share a single twisted pair wire to run both serial and IP protocols. This functionality was previously delivered separately through the BRCM and TBM2 on the original FlexPay Connect solution. A TBM2 is not needed with FlexPay Connect v2.
    - includes a full housing and internal bracket to attach existing site D-Box boards. This eliminates the need for two separate boxes.
    - will have 3 product variants
      - PA04222000002 – BRCM + TBM2 wire sharing capability Equivalent
      - PA04222000012 – BRCM + TBM2 +1 D-Box Board Equivalent – supports up to 8 individual current data loops with high speed communications
      - PA04222000022 – BRCM + TBM2 + 2 D-Box Boards Equivalent – supports up to 16 individual current data loops with high speed communications

- supports up to 16 dispensers per BRCM2 as opposed to 8 dispensers with the original BRCM
- solution will be scalable for Insite360 Encore Remote Management

### **Additional Information for FlexPay Connect v2**

*The below documents will be updated prior to July 11<sup>th</sup>.*

MDE-5265 BRCM2 Installation and Upgrade Instructions Manual

All FlexPay **II** Kit Manuals will contain the updated DCM2 dispenser information.
