Asset Management

Optimize your Site Management

Centralize and simplify your site management using a cloud-based dashboard that allows 24x7x365 real-time access to control and configure your site's forecourt equipment

Remote Management
Reduce the need for costly on-site visits by remotely detecting and resolving dispenser issues

Performance Monitoring
Detect maintenance patterns using flow rates, analyze flow rates and performance metrics

Site Management Analytics
Gain visibility into real-time analytics that provide overall site and device health including security notifications and alerts

Hardware/Software Management
Seamlessly track software versions and remotely update software when needed to maintain compliance

P-2834

Asset Management

OPTIMIZE maintenance costs and maximize uptime through remote, real time dispenser management 24x7x365

Remote Hardware / Software Management

Remote insights and actions to efficiently prepare for, or entirely avoid truck rolls. Schedule and deploy dispenser software updates including remote reboot and software reset options. Remote payment terminal setup and encryption

Real time Performance Monitoring

Maximize dispenser uptime and minimize slow flow by utilizing interactive dashboards featuring real-time metrics, advanced search and filter capabilities, and comprehensives views of device status and events

Automatic Hardware / Software Analytics

Ensure site and organization compliance with asset and software version reporting to support PCI DSS needs including downloading device logs, view events, generate custom reports, and export data sets

Site Management Analytics

Customize alerts to empower your site management ensuring robust detection of payment and fuel fraud / theft, door breaches, dispenser payment issues (printer, keypad) and more

Centralize and simplify your forecourt site management with Asset Management
