

Transact EPS

Powered by iNFX

Transact EPS is composed of microservices, offering greater flexibility, scalability and ease of integration

Transact EPS is a standalone Electronic Payment Server powered by iNFX microservices. It provides the freedom and flexibility to simplify certifications and P2PE updates, easily make changes to payment and loyalty hosts, and control the customer experience with a harmonized payment strategy.

Harmonize Payment Operations

Integrate with any POS, indoor or outdoor payment terminal for a consolidated EPS strategy to reduce L3 certifications

Increased Agility

Make changes, add in new integrations and get to market faster

Drive New Business Strategies

Eliminate vendor lock-in with independence from payment providers

Reduce Complexity

Limit what is in scope for PCI certification with a low-code EPS

Enhance Customer Experience

Speed up transaction times and increase uptime with high availability options

Remotely Manage

Software updates, reporting, configuration and more
