# HID Reader Option

## Smart, Connected Access Control Readers for Islander PRIME Systems

By integrating HID readers into the Gasboy fuel management system, fleet organizations can unify access control for both building and fuel access, streamlining the administration of access devices and simplifying overall management.

# HID Reader Option

HID Global is a recognized leader in the field of access control, providing cutting-edge security solutions worldwide. Their HID readers set industry standards for secure identity solutions and are widely used in corporate and government applications.

HID Global Signo readers are advanced, touchless access control devices used for securely unlocking doors and gates in offices, commercial buildings, and other secure environments. These readers can be used with different types of credentials, such as key cards or fobs.

## What to Know When Quoting the HID Option

- HID is available as an option for new Islander PRIME systems and can be retrofitted on installed Islander PRIMEs. **HID is not available for Site PRIME or Truck PRIME.**
- Because HID formats can vary, Gasboy requires submitting a sample credential for compatibility confirmation before ordering. Contact your Commercial Account Manager for shipping instructions.
- While the previous generation offered both Universal and Indala options, the new HID reader, released in October 2024, is available in a single, standardized model.
- The mag stripe card reader and HID reader must be ordered as a pair.
- Gasboy product support will provide technical support with HID credential formats and assigning credentials to drivers in EKOS and FHO.
