

Software Release Version 11.D

TLS-450PLUS and TLS4 Series Consoles

For Immediate Release

Version 11.D software for the **TLS-450PLUS** and **TLS4 series Automatic Tank Gauges (ATGs)** is now available. This release includes important updates that expand the **Veeder-Root Device Management (VRDM)** scope and enhance support for legacy platform features.

► Key Enhancements Supporting VRDM in Version 11.D

1. Expanded ATG Test Result Visibility

Upgrading to software version 11.D enables the following ATG test results to be viewed within VRDM:

- Static Leak Detection (SLD)
- Continuous Statistical Leak Detection (CSLD)
- Digital Pressurized Line Leak Detection (DPLLD)
- Sensor Status

2. Performance Improvements

ATG-to-VRDM data processing has been optimized to deliver improved reliability and responsiveness.

► Additional Enhancements

- **Web UI**

- Usability and functional improvements have been made to the Web UI to support a better overall user experience.

- **HydrX™ Enhancements**

- Improved HydrX Sweep Cycle Pressure Check to reduce alarm frequency
- Several updates have been made to optimize performance, reduce nuisance alarms, and expand control:
 - Run duration tracking
 - Filter alarms
 - Water limit monitoring
 - Pressure checks
 - Additional system commands
