

Software Release Version 11.F

TLS-450PLUS and TLS4 Series Consoles

For Immediate Release

Version 11.F software is now available for TLS-450PLUS and TLS4 Series Automatic Tank Gauges (ATGs). This release includes new connectivity capabilities for THE PLUS VIEW App along with a new network security feature for the TLS-450PLUS and TLS4 Series ATG.

Key Enhancements Supporting Version 11.F

THE PLUS VIEW Connectivity Improvements

- App setup is now fast and simple with the PLUS VIEW ID – a QR code scan easily links the app directly with a TLS-450PLUS or TLS4 Series ATG.
- Connection via PLUS VIEW ID dramatically simplifies on-site network configuration and eliminates costly static IP requirements.
- Secure, tokenized app-to-ATG connection enables safe remote monitoring access – at no additional cost.

Inquire Only Option – New Network Security Feature

- Serial commands are an important information channel many customers use to remotely monitor their ATGs.
- With software version 11.F, Veeder-Root has added an inquire-only network security toggle for customers seeking an enhanced level of protection over their serial command port.
- In this mode, the ATG responds to "inquire" commands (such as product level requests), but blocks / restricts access to "set" commands that can change a configuration or disable a tank.

► Additional Enhancements

• HydrX™ Enhancements

- Improved HydrX Vacuum Cycle Pressure Check to reduce alarm frequency
- Changed the maximum water limit setting to improve the performance of the HydrX Fuel Conditioning System. New settings are as follows:
 - Model 500D: 5-gallon has a water limit range of 0 to 4.34 gallons
 - Model 250D: 2.5-gallon has a water limit range of 0 to 2.2 gallons

• Ongoing Improvements

- Miscellaneous bug fixes and updates
