

Release Notes

The following notes were added for product release. They contain information that was not available for printing.

1. During installation you may encounter a warning message stating that file VER.DLL is in use. This warning can be ignored. Simply click on the **OK** button to continue with the installation.
2. It is recommended that after completing installation of Remote Control you exit windows and reboot prior to running any applications.
3. Installation of Remote Control generally takes less than 15 minutes. Installation times vary depending on the particular computer and can be quite long (1/2-hour or more) so please be patient.
4. Remote Control supports all TLS-350 RS-232 commands through versions 12/112. However, features added in later versions of TLS software will not be supported by Remote Control.
